INTRODUCTION

This recommendation report is based on a review of our "Anime Dataset Analysis Dashboard", The dataset was obtained from a web scrape of the MyAnimeList website (the largest English-language anime database) on September 20, 2022. Covering 21,460 anime titles across key metrics relevant to content acquisition and programming: type distribution, demographics, ratings, broadcasting patterns, studio and licensor performance, seasonal trends, genre popularity, and top-performing titles. The dashboard enables data-driven decisions for licensing, release scheduling, audience targeting, and catalog strategy.

INSIGHTS

1. Out of 21,460 total titles, TV anime represents the largest share (29.26%, approx. 6,280 titles), followed by OVA (18.56%), Movies (18.17%), and ONA (13.10%). The longest anime has 3,057 episodes, and 325 titles are currently airing. TV anime should be the primary acquisition focus, and currently airing titles should be prioritized for seasonal simulcast deals.

2. Kids (19.69%) and Shounen (9.45%) are the largest demographic segments. However, Josei (adult female) is severely underrepresented at only 0.47%, and Shoujo (young female) at 3.14% is also low relative to market potential. Acquiring Josei and Shoujo titles represents a low-competition opportunity to capture underserved but loyal female audiences. Moreover, PG-13 (7.7k titles, 36%) and G (6.8k titles, 32%) dominate the market. R+ and Rx together account for approximately 11% of titles. The core catalog should be PG-13 and G (68% of acquisitions).

3. Most TV anime air on Sundays (600), Saturdays (553), and Fridays (489). The top timeslots are late-night: 00:00 (166), 00:30 (129), and 22:30 (120). Schedule simulcast releases to align with these peak broadcast days, and focus marketing spend on late-night hours when the core anime audience is most active.

4. Spring (32.8%) and Fall (29.3%) together account for 62% of all TV anime. Concentrate majority of your annual marketing and launch budget on Spring and Fall seasons. Winter (20.2%) and Summer (17.6%) are secondary windows but still viable for mid-tier titles.

5. Top studios include Toei Animation (844), Sunrise (540), J.C.Staff (398), Madhouse (371), and Production I.G (340). Top licensors are Funimation (1,206), Sentai Filmworks (872), and Discotek Media (465).

6. Original works (34%) and Manga adaptations (20.5%) are the largest source categories. Manga adaptations offer consistent, lower-risk acquisition targets, while Original works have higher variance, as some become breakout hits, while others underperform. Allocate approximately majority of acquisition budget to Manga and proven Light Novel/Game adaptations, and small portion to high-potential Original works with strong production teams.

7. Highest score: Fullmetal Alchemist: Brotherhood (9.13). Most members: Shingeki no Kyojin (3.52M). Most favorites: Fullmetal Alchemist: Brotherhood (207.8k). Currently airing titles (325) drive weekly engagement and should be your top acquisition priority. Long-running franchises (exceeding 1,000 episodes) provide stable, long-term viewership and justify catalog permanence.

8. Lastly, the dataset contained missing broadcasting times (filled with 09:09:09), missing end dates (filled with 01/01/1900 for currently airing shows), and incorrect start dates (e.g., Benkei tai Ushiwaka listed as 2039 instead of 1939). Empty text fields were replaced with "Unknown/Other" and missing numbers with 0. Additionally, original rating names such as "R - 17+ (violence & profanity)", "R+ - Mild Nudity", and "Rx - Hentai" were shortened to "R - 17+", "R+", and "Rx" respectively to ensure professional and appropriate language for a dashboard. While these replacements enabled full analysis, findings related to broadcast time, end dates, and start dates should be interpreted with caution.

RECOMMENDATIONS

1. Allocate the majority of your content acquisition budget to TV anime, with particular focus on currently airing titles for simulcast deals. A smaller portion should go to Movies and OVAs (premium one-time events), and another to ONA and short-form content for mobile audiences. Prioritize Manga adaptations for consistent performance, while reserving Original works for high-potential breakout bets.

2. Actively acquire Josei (adult female) and Shoujo (young female) titles. These segments are severely underrepresented and represent low-competition, high-loyalty opportunities. Aim to meaningfully increase Josei representation within your catalog over the next 18 months. Furthermore, keep PG-13 and G as your core catalog, and for R-17+ content, integrate into your main catalog but add content advisories.

3. Schedule major simulcast releases on Sundays or Saturdays to align with peak broadcast volume. Concentrate the majority of your marketing spend on Spring and Fall seasons, which together account for nearly two-thirds of all TV anime. For promotional campaigns, target late-night hours when core audiences are most active.

4. Establish priority licensing relationships with Toei Animation, Sunrise, and J.C.Staff for consistent volume. For Western distribution, prioritize Funimation as your primary partner. For niche and classic titles, work with Discotek Media and Media Blasters. In

addition, ensure the majority of your catalog covers the top genres: Comedy, Action, Fantasy, Adventure, and Sci-Fi. Actively curate Music and School themes, which have the highest title counts. Use Mecha and Parody themes for catalog differentiation and targeted marketing campaigns.

5. Secure perpetual rights for titles that appear in all three top lists (Fullmetal Alchemist: Brotherhood, Hunter x Hunter, Steins;Gate, Death Note). These are catalog anchors that drive both new subscriptions and retention. Use highest-scoring titles for awards and critical acclaim campaigns. Use most-popular titles for subscriber acquisition ads.

6. Launch a "Seasonal Spotlight" program featuring currently airing titles with weekly episode tracking, discussion threads, and curated playlists. For long-running franchises, create dedicated "binge guides" and milestone collections to reduce barriers for new viewers.

7. Finally, track each acquired title against three metrics: members (reach), favorites (loyalty), and score (quality). Build a simple title scoring model that predicts ROI. Reallocate budget away from low-performing sources and toward high-performing sources such as Manga, Light Novel, and Original works from top studios.

CONCLUSION

The anime streaming market is mature but uneven. TV anime (29% of titles) remains the core format, with Spring/Fall seasons, weekend broadcasts, and late-night slots driving engagement. PG-13 and G content serves the widest audience, while R+/R – 17+ content offers smaller but loyal segments.

Significant strategic opportunities exist: Josei and Shoujo are severely underrepresented. Currently airing titles drive weekly engagement; Manga adaptations offer consistent ROI; and top studios (Toei, Sunrise, J.C.Staff) should be priority licensing partners.

By acting on these recommendations (i.e., targeted demographic acquisition, optimized release scheduling, strategic partnerships, and data-driven title scoring), the Streaming Service Content Strategy Team can increase subscriber acquisition, improve retention, and maximize content ROI.
